

Tic-Tac-Toe Tumble

A twist on a popular old game.

For more, scan the QR code link -->

Object. Players win squares with a correct guess of the next tumble of dice being only higher or lower than the last toss.

Set a start number. A player tumbles a pair of dice to set a start number. Player with a correct guess (higher or lower) of the next tumble of dice goes first. If the next toss is equal to the previous number, always tumble again.

Game play. Squares have numbers in this game. 1st player chooses the number square in play and players **only** earn and mark (X or O) in the square with a correct guess (higher or lower) about the next tumble of dice.

Win or lose, the 2nd player chooses a square to then guess the next dice toss as described. The player to get three consecutive marks wins. Repeat if no one wins.
